

# OpenTURNS and HPC within SALOME platform

O. Mircescu

HPC and Uncertainty Treatment  
Examples with OpenTURNS  
EDF – PhiMeca – IMACS – Airbus Group – CEA

Prace Advanced Training Center  
May 29<sup>th</sup> 2019

MAISON DE LA SIMULATION

# OUTLINE

1. Presentation of Salome
2. OpenTURNS graphical user interface
3. Step by step example
4. OpenTURNS graphical user interface distribution and future evolutions

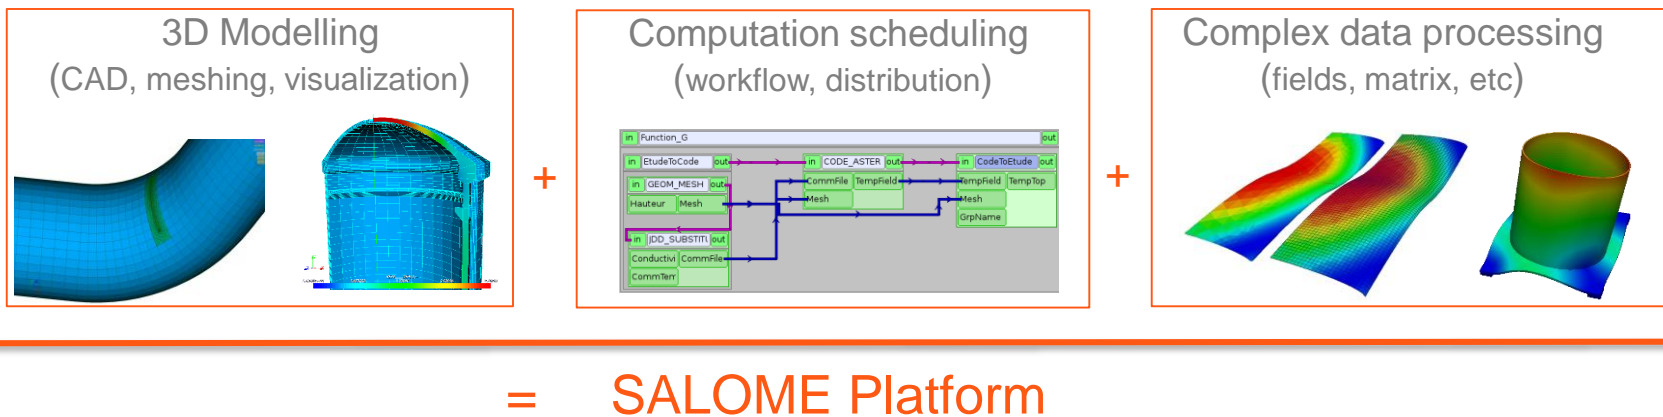

# Presentation of Salome (1/5)

- **What's Salome ?**
  - Modular simulation platform
  - An open framework to build domain specific solutions
- **Who is developing Salome ?**
  - EDF, CEA and OpenCascade partnership

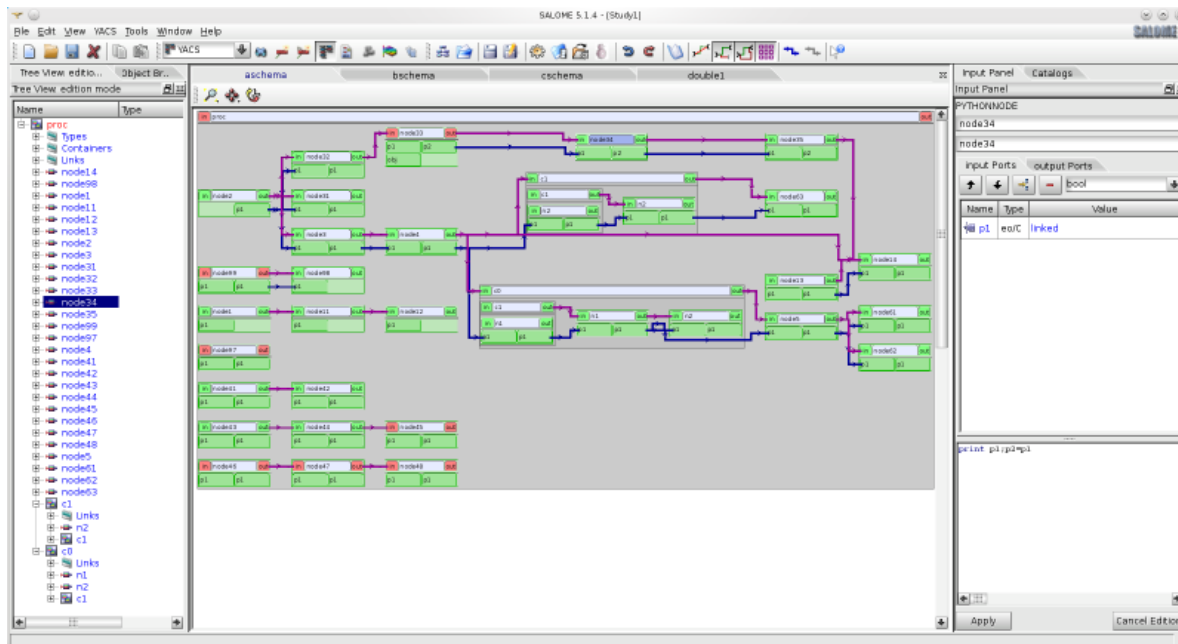

# Presentation of Salome (2/5)

- A middleware providing generic tools for numerical simulations
  - Geometry modelling, meshing, field handling and visualization
  - Data Exchange Model for interoperability between solvers and tools
  - Computation scheduling (YACS)

# Presentation of Salome (3/5)

- Presentation of YACS
  - Distribution of computations on multiple resources
  - Parallelism and parametric computation
  - Chaining computation nodes
  - GUI and APIs for Python and C++

# Presentation of Salome (4/5)

## ■ Presentation of JOBMANAGER

- Create, launch and monitor jobs on computer clusters
- Single interface for several batch managers (Slurm, PBS, COORM, OAR, SGE, LSF)
- GUI and APIs for Python and C++
- Jobs can run scripts or YACS schemas

The screenshot displays the Job Manager interface, which is divided into several sections. At the top, there are tabs for 'Main', 'Management', and 'Refresh'. Below these are buttons for 'Create', 'Start', 'Get Results', 'Stop', 'Delete', 'Restart', 'Edit/Clone', and 'Refresh Jobs'. The main area features a table with columns for 'Job Name', 'Type', 'State', 'Resource', and 'Launcher Id'. The table lists three jobs: 'MyJob' (Command, Finished, porthos, 0), 'MyJob\_0' (Command, Finished, porthos, 1), and 'MyJob\_1' (Command, Finished, porthos, 2). Below the table, there are tabs for 'Job Summary' and 'Job Files'. The 'Job Summary' tab is active, showing 'Main values' and 'Run values'. The 'Main values' section includes fields for Name, Type, State, Launcher Id, Resource, Job File, Env File, and Preprocessing File. The 'Run values' section includes fields for Number of Input Files, Number of Output Files, Execution directory, Result directory, Launcher file, Maximum duration, Required memory, Number of processors, Number of nodes, Exclusive, and Launcher args. On the right side of the interface, there is a 'Job Manager' panel with buttons for 'Load Jobs', 'Save Jobs', and 'Auto Refresh: 30s'. Below these buttons is a 'Messages' section displaying a list of messages: 'New job added MyJob', 'New job added MyJob\_0', 'New job added MyJob\_1', 'New job added MyJob\_2', 'New job added MyJob\_3', and 'New job added MyJob\_4'. At the bottom right, there is a 'Summary' panel with a 'Jobs Summary' section showing 'Number of jobs: 6', 'Number of created jobs: 0', 'Number of queued jobs: 0', and 'Number of finished jobs: 0'. Below the summary is a 'Resource Catalog' section.

Job Name	Type	State	Resource	Launcher Id
1 MyJob	Command	Finished	porthos	0
2 MyJob_0	Command	Finished	porthos	1
3 MyJob_1	Command	Finished	porthos	2

**Main values**

Name: MyJob\_0  
Type: Command  
State: Finished  
Launcher Id: 1  
Resource: porthos  
Job File: /home/l35256/salome/training/relaunch\_job/cas\_sh/recommand.py  
Env File:  
Preprocessing File:

**Run values**

Number of Input Files: 1  
Number of Output Files: 1  
Execution directory: /scratch/l35256/workingdir/myrun/2f3d244134d9c68ff1b58449a58a1e7  
Result directory: /home/l35256/salome/tmp/work/2f3d244134d9c68ff1b58449a58a1e7/result  
Launcher file:  
Maximum duration: 00:01  
Required memory: Default  
Number of processors: 1  
Number of nodes: 0  
Exclusive: no  
Launcher args:

**Messages**

New job added MyJob  
New job added MyJob\_0  
New job added MyJob\_1  
New job added MyJob\_2  
New job added MyJob\_3  
New job added MyJob\_4

**Jobs Summary**

Number of jobs: 6  
Number of created jobs: 0  
Number of queued jobs: 0  
Number of finished jobs: 0

# Presentation of Salome (5/5)

## ■ Parametric layer

- Simplified interface for parametric studies
- Uses YACS and JOBMANAGER

Experimental plan

	C1	C2	C3	C4	C5	C6
	Feed Feed	Slow Feed	Assist Gas	Nozzle Diameter	Focus Distance	Avg Quality
1	100	05	2	2.0	20	3.5
2	95	75	10	1.5	20	4.1
3	100	05	10	1.5	20	4.0
4	95	05	2	1.5	20	2.0
5	95	05	10	2.0	20	3.5
6	95	75	10	2.0	3	3.2
7	100	75	2	1.5	20	4.0
8	100	75	10	2.0	20	4.1
9	100	05	10	2.0	3	1.9
10	95	05	10	2.0	20	4.6
11	95	05	10	1.5	3	3.3
12	95	05	2	2.0	3	4.1
13	95	05	2	1.5	3	4.0

Computation unit

$X_i$

Parametric computation

- Distribution of computation units
- Optimisation of HPC usage
- Management of failover

$(X_i, Y_i)$

Analysis of parametric results

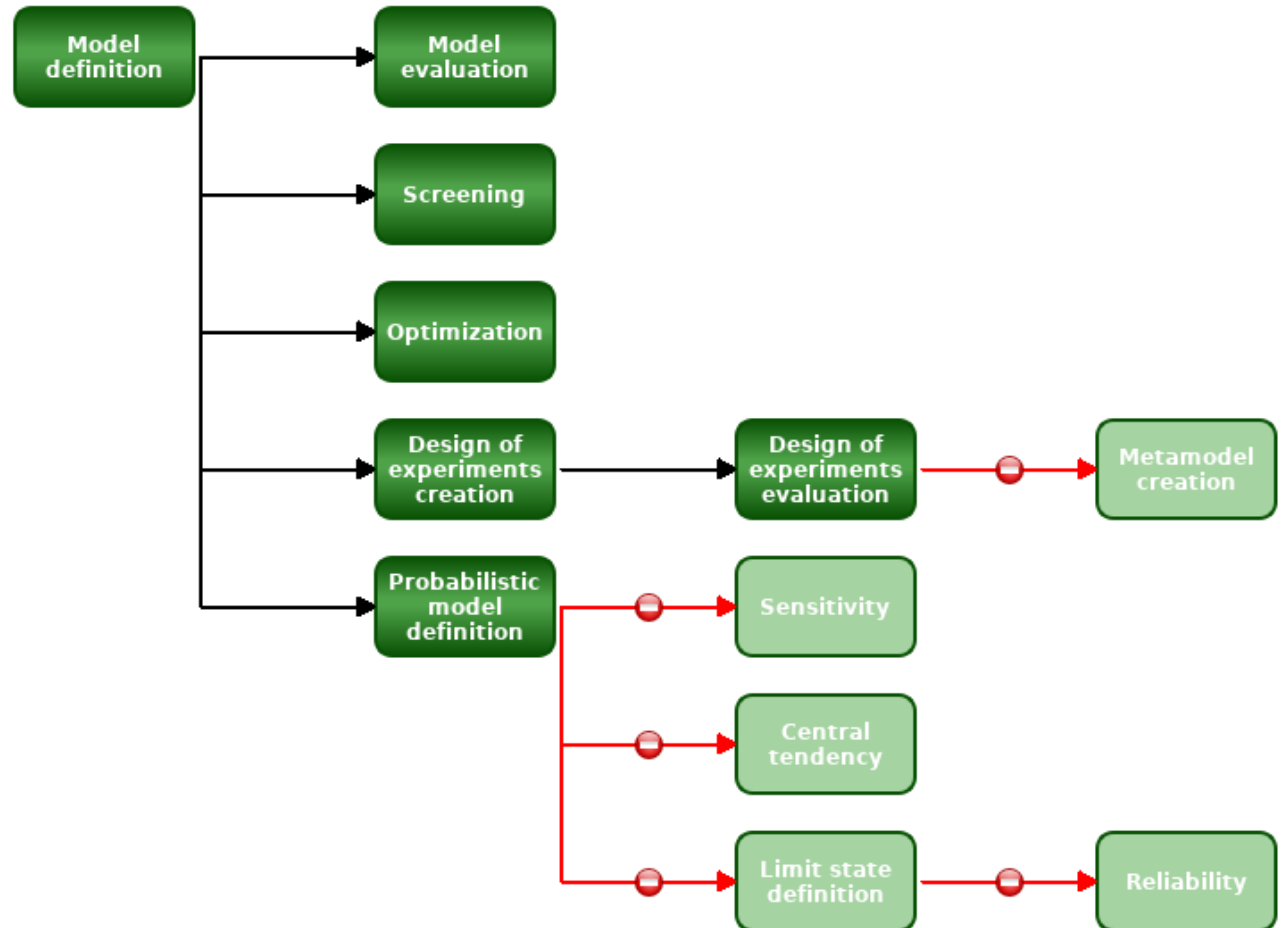

- Meta-modeling
- Statistical analysis
- Visualisation

# OpenTURNS Graphical User Interface (1/5)

- **Goal of OpenTURNS GUI**

- Guide the user in a homogeneous environment through the roadmap defined by the global methodology of treatment of uncertainties

# OpenTURNS Graphical User Interface (2/5)

- **OpenTURNS GUI is more than a simple GUI !**
  - OpenTURNS GUI is based on a high level object model (study workflow)
  - OpenTURNS GUI includes a layer over OpenTURNS tools.
  - OpenTURNS GUI has been designed to mix beginners and advanced users
  
- **How can you use it ?**
  - Standalone binary called otgui
  - In a dedicated salome module
  - Can be used in a customized salome module

# OpenTURNS Graphical User Interface (3/5)

- **Two complementary ways to pilot OpenTURNS GUI : Python and widgets**
- **The design of OpenTURNS GUI allows a strong relationship between Python scripting and graphical interface (Model/View paradigm).**
  - Actions you perform on gui can be mapped into a Python representation.
  - Load python script and dump python script.
  - Start session with graphical interface then continue with script then...
- **OpenTURNS GUI offers software bricks usable outside a dedicated tool**

# OpenTURNS Graphical User Interface (4/5)

- **OpenTURNS GUI is an excellent target for High Performance Computing (HPC)**
  - A large number of independent evaluations
- **Salome features used by OpenTURNS GUI:**
  - Manage a catalog of available resources
  - Make the evaluations parallel and distributed
  - Communicate with the batch manager
    - Define the job parameters
    - Submit and keep track of a job
  - Define the execution environment
    - Define a working directory
    - Copy data from the local workstation to the remote cluster
  - Fetch the results

# OpenTURNS Graphical User Interface (5/5)

- **SALOME software bricks used by OpenTURNS GUI**

- YACS & JOBMANAGER
- GUI Python console widget
- PARAVIS widgets

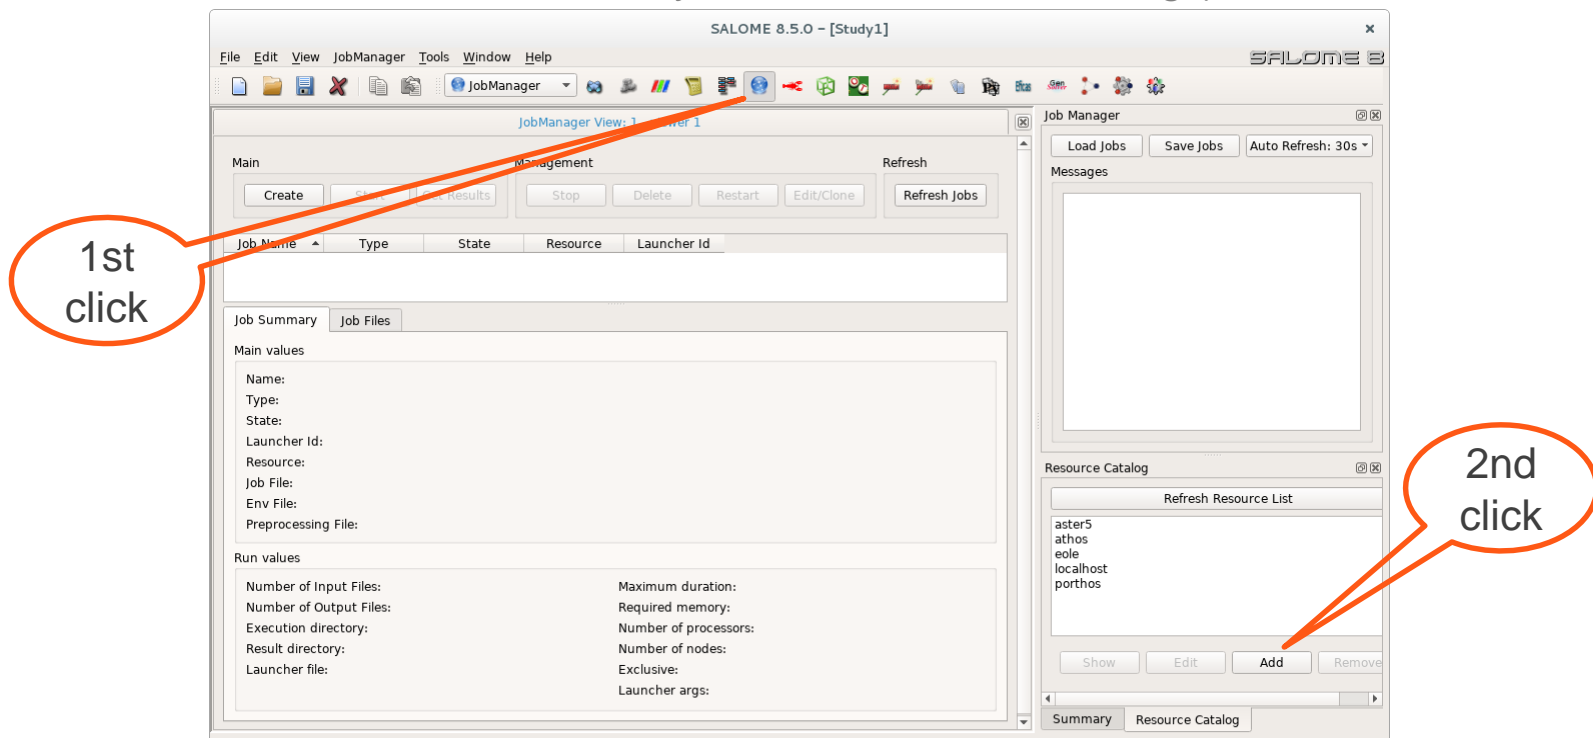

# A STUDY STEP BY STEP

- Install and configure Salome
- Define the function to be studied
- Create a model (YACS or python models in the GUI)
- Define the laws of input parameters
- Choose the type of study (central tendency, etc.)
- Choose the execution parameters
- Run the study and wait for results
- Analyse the results

# Install and configure Salome

## ■ Installation steps

- Install Salome on your personal computer
  - [https://www.salome-platform.org/contributions/edf\\_products](https://www.salome-platform.org/contributions/edf_products)
- Install Salome on the remote cluster
- Make sure you can connect to cluster without typing the password (ssh-copy-id)
- Declare the cluster installation in your local resource catalog (JOBMANAGER module)

# Configure available resources

## ■ Salome resources

- Salome has to be installed on every machine you want to use
- You have to declare each installation in your local catalog of resources
- Main parameters:
  - Name
  - IP adresse
  - User name
  - Path to Salome installation
  - Batch manager

Dialog box titled "Edit/Add a resource".

**Main values**

Name:

Hostname:

MPI impl:

Internal protocol:

# Define the function to be studied

- **Identify uncertain parameters – inputs and outputs of your study**
- **Use the python language**
  - Input parameters must be only float variables
  - Return statement must contain only float variables
  - The name of the function should be “\_exec”
- **The python function should:**
  - Generate the input files for the solver based on the input parameters
    - Create a specific working directory for each execution of the function
  - Launch the solver
  - Retrieve the results from the output files of the solver
- **Test your function**

# Example of a study function

- Syrthes : thermal radiation solver

Heat exchange computation with SYRTHES

h1 T1  
Face S1

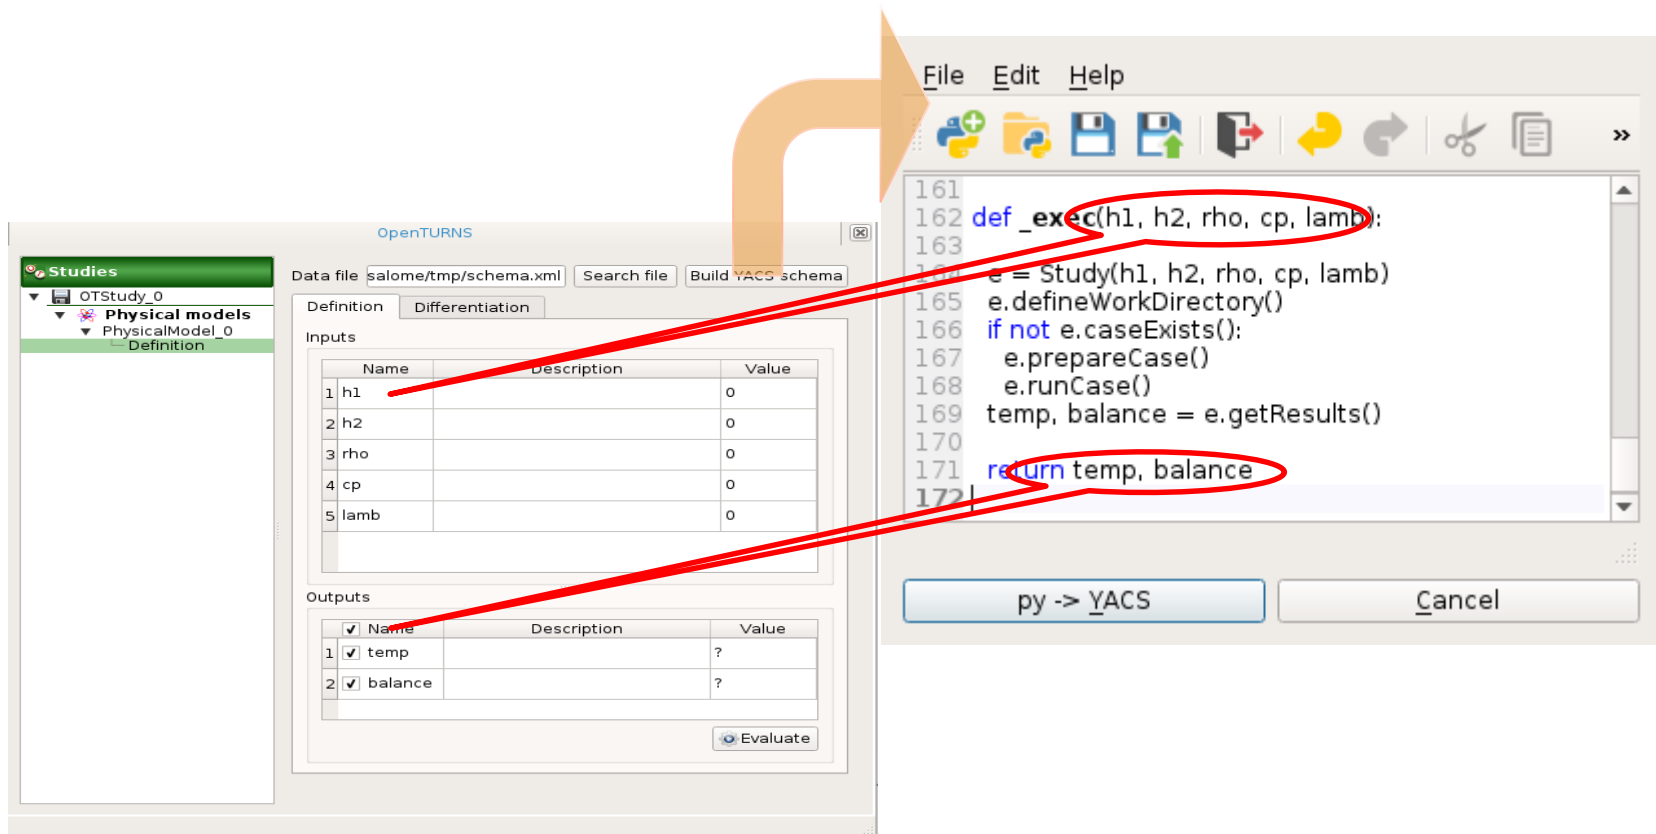

h2 T2  
Face S2

Heat exchange coefficient: h1, h2  
Conductivity: lamb  
Density: rho  
Heat capacity: cp

```
def _exec(h1, h2, rho, cp, lamb):  
    e = Study(h1, h2, rho, cp, lamb)  
    e.defineWorkDirectory()  
    if not e.caseExists():  
        e.prepareCase()  
        e.runCase()  
    temp, balance = e.getResults()  
    return temp, balance
```

# Create a model

- Open the OpenTURNS module in a Salome session
- Create a new study with a YACS model
- Set the python script in the YACS model

# Define the laws of input parameters

- Probabilistic model
- User design of experiments

OpenURNS

**Studies**

- OTStudy\_0
  - Physical models

Import Morris result

# Choose the type of study

# Run the study and wait for results

## ■ Choose

- Computing resource
- Job parameters
  - Number of nodes
  - Time to execute
  - Etc.
- Remote working directory
- Local files to be copied to the remote working directory

The screenshot displays the 'Analysis parameters' window of the OpenURNS SALOME platform. The window is divided into several sections. At the top, a table lists the analysis parameters: Algorithm (Monte Carlo), Outputs of interest ([temp,balance]), Confidence level (95%), Maximum coefficient of variation (-1), Maximum elapsed time (- (s)), Maximum calls (1000), Block size (1000), and Seed (0). Below this is a progress bar showing 0% completion. To the right of the progress bar are 'Run' and 'Stop' buttons. A status message states 'The analysis is ready to be launched.' Below this, there are three tabs: 'Quick configuration', 'Advanced parameters', and 'Files and directories'. The 'Files and directories' tab is active, showing fields for 'Remote work directory' (set to /tmp/salome\_localres\_workdir\_I35256), 'Temporary local directory' (set to /tmp/idefix578vmcb2), and 'Preprocessing script for the frontal' (empty). Below these is a list of 'Additional input files' with a text area containing several file paths: /home/I35256/openturns/mydoc/source/data\_porthos/user\_cond.c, /home/I35256/openturns/mydoc/source/data\_porthos/syrthes.py, /home/I35256/openturns/mydoc/source/data\_porthos/run.sh, /home/I35256/openturns/mydoc/source/data\_porthos/Makefile, /home/I35256/openturns/mydoc/source/data\_porthos/brique\_ech.syd, and /home/I35256/openturns/mydoc/source/data\_porthos/Mesh. To the right of the text area are '+' and '-' buttons for adding or removing files.

Analysis parameters	
Algorithm	Monte Carlo
Outputs of interest	[temp,balance]
Confidence level	95%
Maximum coefficient of variation	-1
Maximum elapsed time	- (s)
Maximum calls	1000
Block size	1000
Seed	0

0%

The analysis is ready to be launched.

# OpenTURNS Graphical User Interface - Distribution and future evolutions (1/2)

- **Distribution of SALOME + OpenTURNS platform**
  - LGPL license for the whole platform (SALOME + OpenTURNS + OPENTURNS GUI)
  - Download SALOME platform with OpenTURNS here:
    - [http://www.salome-platform.org/contributions/copy\\_of\\_combs](http://www.salome-platform.org/contributions/copy_of_combs)
- **OPENTURNS GUI also available stand alone, but without the support for launching on remote resources**

# OpenTURNS Graphical User Interface - Distribution and future evolutions (2/2)

- **Improvements to come**

- Launch, leave and reconnect to a job
- Avoid multiple job submissions for one OpenTURNS study
- Management of a partially executed study
- Management of failed computations

# Questions?
